

Recording in Kyma

- 1) Create a Sound Designer file entitled "hey" and store it any any location you wish.
- 2) In the Signal Path, place the **Disk Recorder** icon to the right of the Sound whose audio output you wish to record.
- 3) Set the values of the parameter fields to those shown below:

- 4) Compile the Sound with the **Disk Recorder** icon highlighted.
- 5) A "recording" check box will appear at the bottom of the **virtual control surface**, as shown below.

- 6) To record, use the mouse to check the box.
To stop recording, use the mouse to uncheck the box.
To resume recording, check the box again.
Etc.

Note that the **recording** box cannot be accessed via MIDI.
