

Electronic Media I
Fall 2004
Bouncing in ProTools

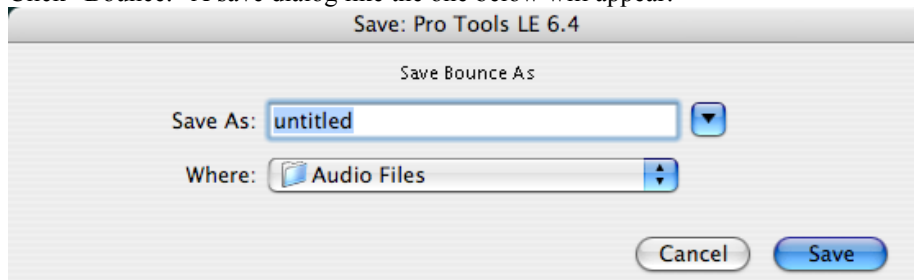

1. Discussion of bouncing tracks.
2. As shown in the window below, highlight the tracks you wish to bounce:

3. Select **File>Bounce to Disk**. In the window that appears, set the parameters to those shown below:

- a) Bounce source.
 - b) File type.
 - c) Format.
 - d) Resolution
 - e) Sample Rate.
4. Click "Bounce." A save dialog like the one below will appear:

5. Open this file in **Peak**, check for "overs," normalize, then burn to CD as discussed in class.
