Composition: Electronic Media I
Fall 2004
Microphone Recording in Pro Tools

1. Set up the microphone as follows:
   a. Find a Shure SM57 microphone and an xlr cable in one of the desk drawers
   b. Set up the mic stand stand and place attach mic to it with the mic holder.
   c. Plug one end of the xlr into the mic.

2. Plug the microphone into the Digi 002 as follows:
   a. Plug the other end of the xlr cable into mic xlr inputs 1 in the back of the Digi 002.
   b. Depress the **mic** button for channel 1 in the upper left corner of the 002.
   c. Note the **gain** knob for channel 1 in the upper left corner of the 002.

3. Launch **Pro Tools**, as discussed in class, then do the following:
   a. Create 1 new mono track.
   b. Select **Display>Edit Window Shows>I/O View**.
   c. Set the input to that shown below:

   d. Adjust the microphone placement and Digi 002 gain control to produce a good signal level (green, no yellow, no red).

4. Prepare to record as follows:
   a. Press the **R** button to arm the track. The button will flash.
   b. Note the transport controls in the upper right corner of the **edit window**, shown below:

   c. Note that the record light, in the upper right corner, is on.
   d. Press record button to arm the transport. The button will flash.

5. To record, press the play button (or press **spacebar**). Note that Track 1 will be displayed as a red block, indicating the amount of recording time, as shown below.

6. To stop recording, press the stop button (or press **return**). Note the following:
   a) The recorded block in Track 1 is now displayed as green, instead of red.
   b) The soundfile is displayed in the **Audio Regions List**, as shown below:

   c) This file can be renamed by double-clicking on the region and following the dialog instructions.
   d) This file exists in Larry>PT.Larry.1>Audio, as discussed in class. You may move it to another folder and edit and process this in any way that you wish.
